### **EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE**

1. This communication is an Examiner's reasons for allowance in response to application filed on May 16, 2005, assigned serial 10/535/126 and titled "CONTROL UNIT FOR ACTIVATING AN OCCUPANT PROTECTION MEANS IN A MOTOR VEHICLE AND METHOD FOR MONITORING THE PROPER FUNCTIONING OF A CONTROL UNIT PREFERABLY OF THIS TYPE".

2. The following is the Examiner's statement of reasons for the indication of allowable subject matter:

a. After carefully reviewing the application in light of the prior art of record and the searches of all the possible areas relevant to the present application, a set of related prior art references has been found, but those prior art references are not deemed strong to make the application unpatentable. Thus, it is found that the application is now in condition for allowance.

b. Although the prior art disclose several claimed limitations, none of the references teaches a control unit and method for activating an occupant protecting device in a motor vehicle which includes a first arithmetic unit supplying clock signal and having first pulse count comparator unit, a first resetter with an input and an output, and a reset input, wherein the output of the first pulse count comparator unit being connected to the input of the first resetter; a second arithmetic unit supplying a clock signal and having a second pulse count comparator unit, a second resetter, and a reset input connected directly or indirectly to the output of the first resetter, wherein the second pulse count comparator unit having an input and an output, the second resetter having an input connected to the output of the second pulse count comparator unit and the second resetter having an output connected directly or indirectly to the reset input of

the first arithmetic unit; an activating unit supplying a clock signal; wherein the first arithmetic unit, the second arithmetic unit, and the activating unit being respectively clocked asynchronously relative to each other; a first logical AND gate having an input side receiving both the clock signal of the first arithmetic unit and the clock signal of the activating unit and having an output feeding an output signal to the input of the second pulse count comparator unit; a second logical AND gate having an input side receiving both the clock signal of the second arithmetic unit and the clock signal of the activating unit, the second logical AND gate having an output feeding an output signal to the input of the first pulse count comparator unit; in which the first resetter resetting the second arithmetic unit by outputting a first reset signal if the pulse count comparator unit detects an inadmissible number of pulse per unit of time in the output signal of the second AND gate, and the second resetter resetting the first arithmetic unit by outputting a second reset signal if the second pulse count comparator unit detects an inadmissible number of pulses per unit of time in the output signal of the first AND gate (claims 13 and 19).

c. Claims 13-25 are allowable over the prior art of record (now renumbered as 1-13).

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Tan Nguyen, whose telephone number is (571) 272-6966. The examiner can normally be reached on Monday-Thursday from 5:30 AM-4:00 PM

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Black, can be reached on (571) 272-6956.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks  
Washington, D.C. 20231
